Note:

This is the second part of “Analysis of fuel prices in Germany”; **all data is filtered for Bavaria only**.

Monthly Dynamics

All data from the next chart is averaged from all refueling stations in Bavaria.

Average prices for each type of fuel

Diesel, E5, and E10 exhibit synchronized price movements, with **E5 consistently being the most expensive fuel**, followed by E10, while Diesel remains the cheapest. Overall, **fuel prices fluctuate within a narrow range of approximately €0.05**.

Prices are **slightly higher at the beginning of December** and gradually decline during the first half of the month. A **brief increase occurs on December 8**, while the **lowest prices are recorded on December 24**, just before Christmas. **In the final week of December, prices rise again**, indicating a year-end increase.

The dynamics of indicators in Bavaria practically coincides with the general German trend. Although in this case the trend is somewhat smoother.
